

Connor Dykes

Senior Mobile Engineer

Longmont, CO 80501 | (417) 861-1985 | connormdykes@gmail.com | connordykes.com | github.com/ConnorDykes

PROFESSIONAL SUMMARY

Senior Mobile Engineer with 6+ years of experience designing, building, and shipping iOS and Android applications across defense, healthcare, logistics, and enterprise SaaS. Proven track record delivering high-impact products — from classified battlefield communication tools to consumer apps serving 500,000+ users. Expertise spans the full mobile stack: native development in Swift and Kotlin, cross-platform frameworks, Bluetooth/hardware interfacing, wearables, real-time data systems, and end-to-end release management on the App Store and Google Play. Passionate about AI-augmented development workflows including agentic coding, prompt engineering, and automated code review pipelines.

TECHNICAL SKILLS

Mobile Development: iOS (Swift), Android (Kotlin), Flutter, Dart, Cross-Platform Architecture, Native Platform Integration (Method/Platform Channels), Bluetooth Low Energy (BLE), Push Notifications, Biometric Authentication, Location Services, Background Processing, Apple Watch (watchOS), Wear OS

Architecture & State Management: BLoC, Riverpod, Provider, GetX, Offline-First Design, Stream-Based Reactive Architecture

AI & Automation: Cursor, Claude Code, OpenAI Codex, GitHub Copilot, AI-Powered Code Review, Prompt Engineering, Context Engineering, Retrieval-Augmented Generation (RAG), Fine-Tuning, Agentic Workflows, Sub-Agents, Model Context Protocol (MCP), N8N, AI Team Management

Frontend & Web: Angular, Ionic, Node.js, JavaScript, TypeScript, HTML, CSS

Backend & Databases: Firebase, Firestore, InfluxDB, PostgreSQL, SQL, Laravel, AWS Lambda, REST APIs, GraphQL

DevOps & CI/CD: Git, GitHub Actions, Codemagic, Fastlane, App Store Deployment, Google Play Deployment, TestFlight, Automated Testing

Design & Collaboration: UI/UX Design, Figma, Canva, Agile/Scrum, JIRA, Confluence

PROFESSIONAL EXPERIENCE

Senior Mobile Developer

October 2025 – Present

goTenna | Remote

- Develop secure, classified mobile applications for U.S. Department of Defense contracts supporting next-generation battlefield communication and situational awareness.
- Architect and implement advanced geospatial mapping systems for casualty evacuation (CASEVAC), vehicle tracking, and real-time operator location awareness across tactical networks.
- Engineer native iOS and Android integrations in Swift and Kotlin to access hardware-level radio APIs and platform-specific security features, bridging them into a shared cross-platform codebase.
- Interface directly with proprietary radio hardware to enable long-range, high-power mesh network communications in disconnected and austere environments.
- Implement a robust Bluetooth Low Energy (BLE) subsystem for persistent background communication with radio peripherals, ensuring reliable data transfer under variable field conditions.
- Maintain compliance with government security standards and classified development protocols throughout the SDLC.

Lead Mobile Developer

March 2024 – October 2025

Immersion Neuroscience | Remote

- Led the end-to-end development of a consumer health and wellness mobile application, transitioning the company from a B2B-only model into the direct-to-consumer market.
- Built and shipped iOS and Android applications from a shared cross-platform codebase, writing native Swift and Kotlin modules for sensor access, health data APIs, and device-specific optimizations.
- Engineered companion wearable applications for Apple Watch (watchOS) and Wear OS, capturing continuous biometric data including heart rate, HRV, and activity metrics.
- Designed and implemented a high-throughput Bluetooth Low Energy (BLE) pipeline for real-time background heart rate data capture, processing 10,000+ data points per session using an asynchronous stream-based architecture.
- Architected a fast, secure backend using Firebase (Authentication, Firestore, Cloud Functions) and InfluxDB for time-series biometric data storage and analytics.
- Managed the complete application deployment lifecycle across the App Store and Google Play, including TestFlight beta programs, staged rollouts, and production monitoring.
- Mentored a team of 2 junior developers, conducting code reviews and establishing coding standards and CI/CD pipelines.

Mobile Developer

May 2023 – March 2024

MGenio | Remote

- Collaborated within a core team of 3–5 developers to deliver enterprise-grade iOS and Android solutions for high-profile international clients.
- Developed and maintained the official New York City MTA mobile application, serving 500,000+ daily active users with real-time transit data, route planning, and service alerts.
- Built and scaled an enterprise warehouse inventory management system for Sherwin-Williams, deployed across 150+ manufacturing sites, 5,000+ retail stores, and 10,000+ distribution points nationwide.
- Engineered field workforce management software with integrated delivery tracking, warehouse inventory control, and third-party logistics plugin integrations.
- Implemented robust offline-first architecture patterns to ensure reliable app functionality in low-connectivity warehouse and manufacturing environments.

Mobile Developer

June 2022 – May 2023

Engage Mobilize | Remote

- Developed fuel tracking and trucking logistics software in an Agile Scrum environment with a 4-person development team, delivering bi-weekly sprint releases.
- Architected and implemented both frontend and backend of a mobile and web application for iOS, Android, and Web, serving as the primary full-stack developer.
- Built advanced geospatial features including real-time GPS tracking, geofencing, route optimization, and automated job status updates based on driver location.
- Contributed to product strategy, UI/UX design, and system architecture decisions, collaborating directly with stakeholders and end users.
- Integrated REST APIs with a Laravel backend and PostgreSQL database, implementing efficient data synchronization and caching strategies.

Mobile Developer

January 2020 – June 2022

Ecolab | Remote

- Developed a full-stack suite of kitchen operations and personnel management software used by major QSR brands including Chick-fil-A, Starbucks, Taco Bell, and 50+ additional enterprise clients.
- Engineered Bluetooth Low Energy (BLE) connectivity and complex networking protocols to interface with an array of IoT-enabled kitchen equipment in high-volume industrial environments.
- Built and maintained both web and mobile clients from a single shared codebase, reducing development time by 40% compared to fully native approaches.
- Operated within a high-velocity Agile team, consistently delivering features on a rapid 1-week sprint cycle with automated CI/CD deployment pipelines.
- Implemented real-time data dashboards for kitchen temperature monitoring, equipment status, and compliance tracking, helping clients maintain food safety standards.

EDUCATION

Bachelor of Science, Recreation, Sports, and Parks Administration

August 2016 – May 2018

Missouri State University | Springfield, MO

Associate of Arts

August 2014 – May 2016

Ozarks Technical Community College | Springfield, MO

ADDITIONAL INFORMATION

- U.S. Citizen with experience on classified government contracts.
- Available for remote positions only.
- Active contributor to the open-source mobile development community.
